1.Claims 2-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4, line 2, "the surface layer" lacks antecedent basis. Also, given the recitation in claim 4, it is not clear whether applicant intends the surface layer—or the entire support member-- in claims 2 and 3 to have the instant elastic modulus. Clarification is needed.

2.The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 5-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakamura et al (see paragraphs 0133-0136).

Nakamura et al discloses the instant method, apparatus and film made therefrom comprising steps and means for nipping an antireflection film on a transparent support base with an embossing member and a support member, the embossing member being a steel roll and the support member being a back-up roll covered with polyamide. It is submitted inherent that the embossing roll, by providing the antiglare treatment, would have the instant "plurality of convexes and concaves". Also, since the support member has a polymeric layer covering it, it is submitted inherent that any pressure applied thereto would be dispersed therein due to the

10/809,872 Art Unit: 1791

polymer's relative flexibility—as compared to steel. Clearly, the polyamide layer of the support member would have a pencil hardness less than that of the steel embosser. Paragraph 0136 discloses that the embosser is heated to 140 deg C, and this would require some heating device or means. Whether this temperature is above the glass transition temperature of the support base constitutes a functional limitation which the heating device of Nakamura et al would inherently be capable of performing.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al.

The applied reference discloses the basic claimed invention as set forth in paragraph 1, supra, Nakamura et al essentially lacking a clear teaching of the exact elastic modulus of the support member and the pencil hardness of the surface layer of the support member. It is submitted that these exact values would have been obvious dependent on the exact material used for the support member and how resilient one of ordinary skill would want it to be to absorb and dissipate the pressing force. Elastomer and polymer coated rollers are typically used in the art for this purpose.

4. Any inquiry concerning this communication or earlier communications

from the examiner should be directed to Mathieu D. Vargot whose telephone

number is 571 272-1211. The examiner can normally be reached on Mon-Fri

from 9 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the

examiner's supervisor, Christina Johnson, can be reached on 571 272-1176.

The fax phone number for the organization where this application or proceeding

is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from

the Patent Application Information Retrieval (PAIR) system. Status information

for published applications may be obtained from either Private PAIR or Public

PAIR. Status information for unpublished applications is available through

Private PAIR only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-

free).
